

---

**Here are the detailed project specifications:**

## **1. Project Overview**

**We are developing a Token DApp on the Ethereum blockchain, incorporating Staking features.**

- The front-end and back-end infrastructure are nearly complete.**
- We are now focused on integrating Staking features into the existing DApp, which may require modifications to both the front-end and smart contract.**
- The primary objective is to integrate staking to enhance our token's initial momentum and visibility.**
- After this phase, we plan to implement additional features such as trading functionality, volume bots, and a voting DApp to sustain and grow token trends.**

## **2. Start Date**

**Estimated 21st, April (subject to slight adjustments based on applicant availability).**

## **3. Project Duration**

**Expected completion within 6 months.**

## **4. Resource Allocation (FTE)**

**$1 \text{ FTE} \times 10 + (0.3\text{--}0.5 \text{ FTE}) \times (5\text{--}10) \rightarrow \text{Total: } 11.5\text{--}15 \text{ FTE per month.}$**

---

## **5. Project Type**

**Time & Material.**

## **6. Contract Details**

- To be determined after you gain a deeper understanding of the project.**
- We will finalize contract terms following a brief meeting.**

**Next Steps:**

**Here is the demo package link for your review:**

**<https://github.com/Iris25-dev/ERC20-Staking.git>**

**Please review the package and share your constructive feedback with us. Once we receive your insights, we will schedule a meeting immediately.**
