Simple Test

This is a simple test that takes about 30 minutes.

There are so many candidates that it is difficult to have a meeting with all of them to discuss their experience, skills, and development-related problems. Therefore, we plan to conduct a simple test to assess their understanding, application, and creative ability for demo projects. We believe that your skills and experience are as important as your profile. We will check your abilities and skills in more detail through the test.

Take on tasks that fit your role, your tech stack, and your confidence.

🟢**UI/UX & Frontend : Add a switch button to the navigation bar section and implement transition effects between dark mode and light mode.**

🟢**Backend : Implements the ability to add, delete, edit about Real Estate Cart (Add API for this).**

🟢**Web3 : Connect a software wallet (e.g. Metamask) by clicking the "Connect Wallet" button.**

You can use this demo version to complete the task.
This demo was developed last year, but there are some bugs because the previous dev team's skills were not that high. Please understand this and try to overcome it.

👉Demo project : https://bitbucket.org/web3_space/real-estate-rental-platform

After working, please submit the results as a video or screenshot.
And if you have any additional ideas (tech stack, animation, team structure, etc.) related to the project, please leave an audio recording or doc.

Our team mainly uses MacBooks, and our CTO also prefers to work on macOS. Therefore, the interview will be conducted on macOS, and we recommend that you bring your MacBook. If you are hired, we will provide you with a company-issued MacBook to comply with our security policy.

🔑Conduct the test on a Mac OS or Windows10 system environment.
